

Making **sustainable** more **attainable**.

## North Carolina A&T State University Energy and Sustainability Program

North Carolina A & T State University (NC A&T) partnered with NORESKO in 2013 to implement its first energy savings performance contract (ESPC) to identify opportunities and implement initiatives designed to conserve energy and create sustainable solutions for our campus.

NORESKO has completed the design of various initiatives that will save the University \$303,000 per year while reducing our environmental footprint. The implementation of these initiatives is slated to begin April of 2014 and be completed May of 2015. The ESPC will not only deliver the prescribed savings but it will also enable the University to meet its State mandate of reducing energy consumption by 30% in 2015. Through the ESPC, NORESKO in partnership with NC A&T's Energy Services and Sustainability group will create a comprehensive preventative maintenance and training program geared towards the maintenance staff so as to enable the University to not only manage it's expanding high tech building portfolio but also to sustain the gains made. These conservation

efforts and improved efficiencies will help us reduce costs and manage utility risks. Once the program is complete, we can expect to see significant savings in utility and operational costs. The university will use the energy and operational savings generated to pay all or part of the project.

We are excited to be starting on this phase of the program. Greening our facilities and improving our energy efficiency is important to us. The program with NORESKO will support these initiatives over the long-term and allow us to demonstrate our environmental stewardship to the community. You can also do your part by using energy wisely. If you have any questions or concerns, please contact:
